ServeNET

Solutions

COMMUNICATION NETWORK SOLUTION

DIA

Leased Lines Dedicated Internet

The most commonly known internet connection used by SMEs & large corporates

VPN

Virtual Private Network Services in Egypt “VPN”

A VPN is a private network routed through the Internet from the business's private network to the remote site or employee.

Internet security

Internet security system solutions

Objective is to establish rules and measures to use against attacks over the Internet. The Internet represents an insecure channel for exchanging information, which leads to a high risk of intrusion or fraud, such as phishing, online viruses, Trojans, worms and more

ServeNET

Methods of transmission

Wimax Internet Technology within Egypt

WiMAX (Worldwide Interoperability for Microwave Access) is a long range wireless connection established between the business location to provide multiple physical layer (PHY) and Media Access Control (MAC) options.

ServeNET

Methods of transmission

Optical fiber dedicated Internet Connectivity Services.

Fiber-optic dedicated Internet Connectivity can lend a great advantage to companies of all sizes, particularly organizations that use the cloud for apps or data storage.

ServeNET

Methods of transmission

Multi-service Access Node (MSAN), Connectivity Services.

Multi-service Access Node (MSAN), to provide telephone, ISDN, and broadband such as DSL all from a single platform.

Methods of transmission

Microwave connectivity services

Microwaves are widely used for point-to-point communications which allows conveniently-sized antennas to direct them in narrow beams, which can be pointed directly at the receiving antenna. This allows nearby microwave equipment to use the same frequencies without interfering with each other, as lower frequency radio waves do.
